

Recording Acoustic Guitar in GarageBand with the iRig Acoustic Stage: An Quickstart 5-Step Guide

Step #1: Hook mic to acoustic guitar sound hole

Step #2: Run Cable from mic to preamp and from preamp to output (USB audio interface)

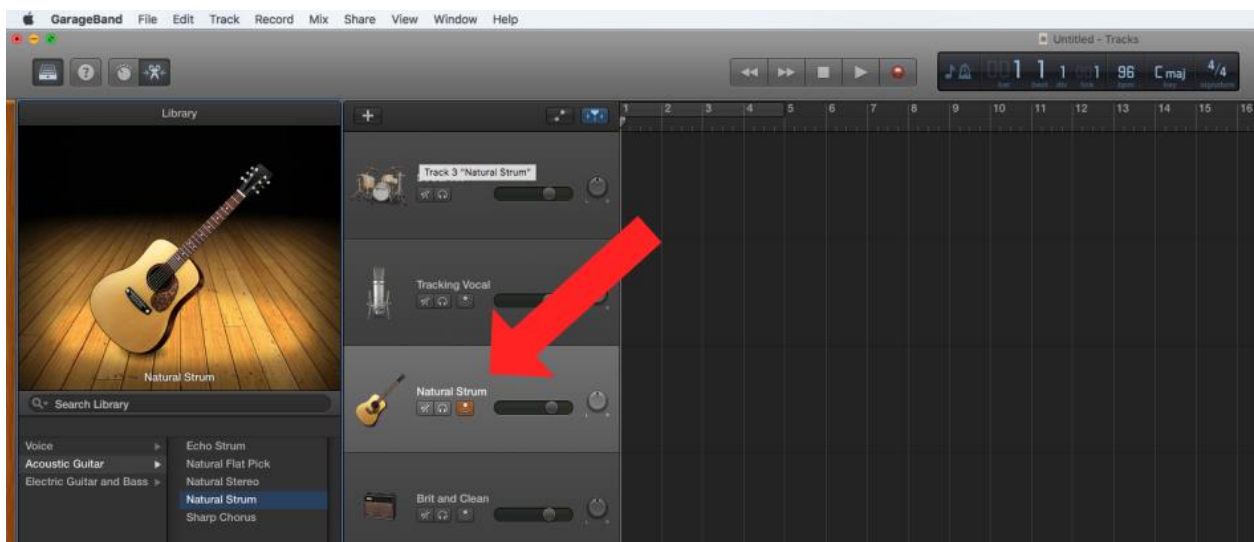

Refer here for help setting up a USB audio interface: <https://www.guitarchalk.com/play-guitar-through-garageband/>

Step #3: Get familiar with controls on preamp

Step #4: Start GarageBand, select the “Songwriter” option on the new project screen and toggle the “Natural Strum” channel.

Step #5: Set channel volume, master volume and hit record. You're good to go!
